

## SportsHeadz App Information

We received access to the SportsHeadz App when this company and MBSport company joined. This makes this App free to users of the MBSport website.

This team App works like other sport management apps, with the advantage that it syncs with our website. Team games, practices, tournaments, schedule changes will automatically sync with the app. Team members will also receive automatic notification. Coaches and managers (under STAFF in the App) will also receive notification of players attending these events.

The App also syncs with 'Events' within the website, but there is a feature in the App called Hangout where the team can schedule private events (i.e., team celebration or get together).

Scheduling of games and practices continue to be thru Lisa. Teams can schedule their own event in their team website page.

This App also has the Instant Messaging feature like other Apps.

If we had to go back to Health Screening (good grief ☹) this App has this within it.

I'm aware that SportsHeadz is also working on Live Streaming within the App - but this is still in the works.

The App is set up with 'Players', 'Staff' and 'Guardians'.

Players who are young can be in the App but are attached to a Guardian(s) who receive the notification/request of attendance.

Staff are the coaches and manager. The website automatically adds once entered into the website roster. Staff receive attendance responses and have the ability to accept or reject a request to join the team app.

Guardians are parents of the players. Grandparents may wish to join the team. While the grandparents won't be attached to a player (but can be), they would be found in the Guardian list. This would be a decision for the Coaching staff.

App team members can be entered manually, or if all players are registered in Ramp this would be an export - import activity or Players/Guardians can download the App and then request to join the team (being accepted by the 'Staff')

One email is attached to one App profile - this means that if parents use one email address, only one of them will have a profile with that address.

If set-up is manually or thru an import, each profile will receive a request to download the app. If they already have, when they log in they will have access to the Team.
